

## Senior System Engineer

### Roles and Responsibilities

- Design and deliver enterprise integrations and dashboarding tools to support production reliability (monitoring, alerting, event management).
- Work with other engineers to deliver performance and service standards from your internal customer's requirements.
- Lead in developing new integrations along with a plan to optimize existing tools while consolidating our footprint.
- An ideal candidate will be unrelenting at implementing with good design principles, solid development practices and deliverables that are secure, repeatable and scalable.

### Skills and Qualifications

- BS or MS in Business, Computer Sciences, Engineering, or related field (an equivalent combination of related education, training, and experience may be considered).
- Minimum of 5 + years in related work experience.

### Required Skills

- 2-4 years' experience working in system integration or automation.
- Familiarity with the principles of DevOps.
- Superior oral and written communication skills with the ability to influence others.
- Proficiency working in a complex, dynamic technical environment.
- Expert knowledge of operating systems (Windows/Linux).
