

Magento Developer

Summary

Our Business Technology consulting professionals help customers design, develop, implement, manage change and processes by combining business and solution strategies with our relevant partner technologies and resources. The end goal of our work is enabling process improvement and timely project delivery, which in turn increases our clients' bottom line.

We are actively seeking professionals with Magento experience to form part of our Magento Consulting & Technical Support teams.

The successful candidate will be a self-starter with ability to initiate and complete small projects quickly with minimal supervision as well as interact positively with both internal and external clients.

A professional at this position level within Nisum shall have the following minimum responsibilities:

- As a Magento professional, you will form part of a team building and maintaining Magento applications from project start to finish. You will work alongside frontend developers and UI designers to provide performant Ecommerce solutions.
- The position involves development and support of dynamic PHP / MySQL based web sites in Magento.
- Duties range from custom development of scripts with few development precedents, to creation of entirely new extensions or themes for Magento.
- Responsible for the design, development, maintenance and support of new and existing e-commerce projects for Nisum customers, while working with global service delivery teams onshore, nearshore and offshore.
- Work closely with Senior Manager & Consulting VP to help execute technology consulting engagement.

- Assist in pre-sales efforts, proposal development, presentations with technical inputs and proposed solutions to customer pain points.
- Develop consulting methodology and procedures on new assignments.
- Manages small to medium sized consulting teams and/or work efforts (if in an individual contributor role) at a client or within Nisum. May need to work with team members across different geographies and time zones
